

Austere - Elements

Inspired by molecular compounds, this light fixture is available in X, Y, + or - structures. Its unique base connects up to 13 elements using a single power point. Spacers available in different lengths and height (three lengths) for complete freedom when creating compositions. There are no limits to the changes and extensions you can make.

Customization available.

Designer: Hans Verstuyft

The architectural lighting of this company translates light into shapes to create an atmosphere, a concept, a project. With 15 years of know-how and expertise, Bruno Van Meenen created his design and production company for architectural lighting in 2001.

Entirely Belgian, the designs are simple but tastefully executed, with a twist of happy optimism. As an example, they use solid aluminum for its products, which results in seamless fixtures for any interior and exterior application. As part of their corporate culture, they rely on the absolute trust of its partner network represented in about 20 different countries.
